The use of CS Capsules is intended for training that involves exposure.

CS capsules are used in a confined area to simulate the presence of chemical agents in a tactical situation. The number of capsules used depends on the cubic volume of the area. Generally, five capsules would sufficiently contaminate an unventilated air space of 15 cubic meters for a duration of 20 - 30 minutes.

The capsules are placed on a metal plate or in a metal container exposed to a constant heat from a candle or sterno flame. When heated, the capsules will emit CS in the form of a gas.
